Removal of rust stains, efflorescence, mineral deposits, grout haze (including epoxy)		Sulfamic acid crystals		Sulfamic acid crystals		Sulfamic acid crystals		Sulfamic acid crystals		Sulfamic acid crystals	

GROUT SEALING FAQs

Q) What is the best way to protect new grout joints on a stone or tile installation?

A) Seal the grout joints with **Aqua Mix Grout Sealer**, with a minimum of two applications about 3 to 4 days from the day of grouting, to help maintain the grouts original beauty and resistance to water, oil and acid based liquid contaminants.

Q) Does Epoxy Grout need to be sealed?

A) No, epoxy grouts are non-porous so they do not need the protections of a sealer.

Q) Grout haze, how to prevent it?

A) Mix **Aqua Mix Grout Haze Clean-Up** in your last bucket of rinse water to safely remove the latex grout residue off of your tile.

Q) If I have grout haze how can it be removed?

A) If you have a light grout haze on the surface of your tiles, use **Aqua Mix Grout Haze Clean-Up** full strength scrubbing the surface with a good white nylon scrub pad to safely scrub off the haze.

Q) How can grout haze be removed off of acid-sensitive tiles and stone?

A) To safely scrub off a heavy grout haze off of any acid sensitive tile and stone surfaces we can recommend scrubbing the surface with **Aqua Mix NanoScrub** or the **Aqua Mix Poultice Stain Remover** using a white nylon scrub pad and water.

Q) How can we remove grout haze off of ceramic, porcelain, quarry tiles, slate, Saltillo, terra cotta and brick surfaces?

A) **Aqua Mix Cement Grout Haze Remover** can be used on installations that are not sensitive to acid cleaners, to effectively scrub off grout haze.

Q) How best to remove a heavy epoxy grout haze?

A) For heavy epoxy residue, we recommend a combination of **Aqua Mix Sealer & Coating Remover** with **Aqua Mix NanoScrub** on top of the stripper then scrub the area with a white nylon scrub brush.

Q) What if the grout of our ceramic or porcelain tile cannot be scrubbed clean?

A) **Aqua Mix Grout Colorant** can be used to re-color and seal an existing grout to look like new again.

Q) What are the best cleaning products to use on a new grout, tile or stone installation?

A) Use neutral cleaners on all tile and stone installations like **Aqua Mix Concentrated Stone & Tile Cleaner** to safely clean the surface without damaging a sealers protection or affecting the tiles, stone or grouts original structure.

Q) How can hard water stains and mold be removed off of our shower grout and tiles?

A) It can be safely scrubbed off with **Aqua Mix Cement Grout Haze Remover** using a white nylon scrub pad or brush and water.

Q) What can be used to remove efflorescence or mineral salts off of grout and/or tiles?

A) **Aqua Mix E~ -Ex** can be used as needed to help neutralize and remove efflorescence also known as mineral salts.

Q) How can we remove rust stains off of grout and tiles?

A) **Aqua Mix Cement Grout Haze Remover** can be used as needed to safely scrub off most rust stains off grout, tiles or stone surfaces.

Q) How can we remove an old sealer off of our grout?

A) **Use Aqua Mix Sealer & Coating Remover** to help strip off ole sealers and coatings.
